BOTH OF THESE GUNS ARE LETHAL

Never

☒ Look into the “business” end

☒ Point it toward any part of the body (yours or others!)

12 psi of air can “pop” an eyeball from its socket.

At 4 inches, 40 psi of air can rupture an eardrum, cause brain hemorrhage or possible death.

4 psi of air in the mouth can rupture the lungs and intestines.

4 psi of air can rupture a bowel.

Air can enter the navel through a layer of clothing to inflate and rupture the intestines.

Less than 80 psi of air, striking a small wound on the hand has been known to inflate the arm to “the size of a grapefruit” because of air bubbles in the bloodstream.
